Allowable Subject Matter

Applicant discloses a method of making polysiloxane-polyvinyl acetal copolymers that entails copolymerizing a vinyl ester compound with a polysiloxane bearing unsaturated groups, hydrolyzing the ester moieties thereby forming a polysiloxane-polyvinyl alcohol copolymer, and then reacting the alcohol moieties with an aldehyde to obtain the target compound.

Ito et al., U.S. Patent # 6,727,336 and Imai et al., JP 60231704 both teach an analogous process wherein a corresponding polymerization and saponification step are carried out. However, neither of these further contemplate modifying the hydroxyl groups of the PVA component nor would it have been obvious to do so as the PVA segment is desirable in both instances for its hydrophilic properties. That is to say, the modification of the teachings of these documents would destroy their teachings.

Insofar as these documents represent the most germane prior art known, but fail to even render obvious the instant invention, claims 31-54 are allowable.

As an aside, it is acknowledged that the claims are directed to products, and not processes. It is further recognized that other strategies of making polysiloxane/polyvinyl acetal copolymers are known. However, the products made by these other synthetic approaches are patentably distinct because the polysiloxane chain is introduced by a strategy other than copolymerization of a appropriately-functionalized polysiloxane with a vinyl ester such as, for instance, grafting a polysiloxane to a pre-formed polyvinyl acetal using a linking compound.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
